DUG Installs Immersive Cooling for Bubba Supercomputer in Houston

 April 17, 2019 by [staff](#)
 [Leave a Comment](#)

Today DownUnder GeoSolutions (DUG) announced that tanks are arriving at Skybox Houston for “Bubba,” its huge geophysically-configured supercomputer. “DUG will cool the massive Houston supercomputer using their innovative immersion cooling system that has computer nodes fully submerged in specially-designed tanks filled with polyalphaolefin dielectric fluid. This month, the first of these 722 tanks have been arriving in shipping containers at the facility in Houston.”

RAVE Servers now available with up to eight NVIDIA® TESLA® GPUs.

Accelerate your most demanding HPC and hyperscale data center workloads with NVIDIA® Tesla® GPUs.

Tesla delivers top performance for:

- Virtualization
- Deep Learning Training
- Deep Learning Inferencing
- Supercomputing
