

Japanese Energy Company INPEX Signs up for DUG McCloud

October 21, 2020

Oct. 21, 2020 — High-performance computing experts DUG Technology has signed a deal with Japanese energy company INPEX to provide HPC cycles and software using DUG McCloud.

DUG Technology Managing Director Matt Lamont said the INPEX collaboration had the potential to lead to the DUG McCloud platform being used for other INPEX projects as part of a long-term relationship.

INPEX tested the platform at DUG's headquarters in Houston before signing the contract.

"We know that once prospective clients try the software, test the algorithms and use the platform, the inherent benefits become obvious," Dr Lamont said.

"The momentum continues to build around our High-Performance Computing as a Service business, with several companies evaluating the benefits DUG McCloud can provide.

"We are excited that those companies assessing DUG McCloud are recognising the opportunities it presents and we are looking forward to that interest being converted into contracts."

About DUG

DUG is a technology company at the forefront of high-performance computing with a strong foundation in applied physics. DUG's innovative hardware and software solutions for the global technology and resource sectors enable clients to leverage large and complex datasets. The company provides cloud-based hardware and software solutions, multi-tiered support for technology onboarding and code optimisation, and integrated services. DUG has offices in Perth, London, Houston, and Kuala Lumpur. The company designs, owns, and operates some of the largest and greenest supercomputers on Earth.
