DUG, PetroVision to deliver specialised seismic data processing solutions in Nigeria

CREATED: 22 NOVEMBER 2024

Geoscience services provider DUG Technology has announced a new partnership with energy consultancy PetroVision to promote and deliver specialised seismic data processing solutions in Nigeria

The partnership brings together DUG's expertise in advanced analytical software and reliable **cloud-based high-performance computing** (HPC), and PetroVision's perceptions on geoscience, engineering and economic aspects across the **hydrocarbons** sectors, including **carbon capture and storage (CCS)** and **field exploration geochemical sampling** for critical minerals such as **lithium**.

PetroVision will facilitate operations within Nigeria, while DUG will supply technology and support. This includes use of the **DUG Insight** processing, imaging and interpretation software and remote access to DUG's teams of geophysical experts.

Leveraging cutting-edge technology

PetroVision will manage a local processing office within Nigeria, utilising computer resources via the **DUG HPC Cloud** platform. "We're thrilled to join forces with DUG, leveraging their cutting-edge technology to enhance our technical capabilities, increase local content participation and broaden our service offerings in Nigeria," said **PetroVision's technical director, Lekan Aluko**.

"We are looking forward to working closely with the team at PetroVision to build a strong presence, and grow our client base in Nigeria," said **Matthew Lamont, managing director, DUG**.

DUG's interests in Nigeria comes following an uptick in the region's exploration scene, with the latest being a shallow offshore discovery by **Chevron** in the **Western Niger Delta**.
