

DUG MULTI-CLIENT

Enhanced seismic imaging for smarter exploration, appraisal and development decisions.

Africa & Europe

Equatorial Guinea MC3D

- 9,525 sq km – one seamless dataset
- Advanced broadband 3D Q-PreSDM reprocessing workflow including MP-FWI enhancements
- Incorporates six legacy surveys
- Project partners: Geoex MCG, Perceptum, MHDM

Equatorial Guinea MC2D

- 5,658 km – basin-wide regional dataset tied to well control
- Advanced broadband PreSDM reprocessing workflow including FWI
- Incorporates two modern legacy surveys (2005 & 2011)
- Reprocessed simultaneously with the Equatorial Guinea MC3D to ensure consistency
- Project partners: Geoex MCG, Perceptum, MHDM

Norway Quad 35 Hybrid MC3D

- 420 sq km – high-density streamer and OBN acquisition
- Includes DUG MP-FWI Imaging
- Resolves imaging challenges on the Gjoa field
- Reveals adjacent prospectivity
- Project partners: Geoex MCG, Seismic Partner, BGP

All backed by
DUG's powerhouse
seismic processing,
imaging and HPC
technology.

Asia Pacific

Malaysia East Sarawak MC3D

- 45,000 sq km – one seamless dataset
- Advanced broadband 3D Q-PreSDM reprocessing workflow including MP-FWI enhancements
- Incorporates over 60 legacy surveys
- Data available from early 2027

Australia, Vulcan Sub-Basin NOVAR MC3D

- 17,658 sq km – one seamless dataset
- Advanced broadband 3D PreSDM reprocessing workflow including FWI enhancements
- Incorporates ten legacy surveys
- QI, rock physics and regional seismic interpretation studies available

Australia, Northern Carnarvon Basin BEX MC3D

- 16,468 sq km – one seamless dataset
- Advanced broadband 3D Q-PreSDM reprocessing workflow including FWI enhancements
- Incorporates six legacy surveys
- QI, rock physics and regional seismic interpretation studies available

All backed by
DUG's powerhouse
seismic processing,
imaging and HPC
technology.

Americas

VENEZUELAN PROJECTS IN COLLABORATION WITH GEOEX MCG

- More than 48,000 km of exclusive broadband PreSDM reprocessed datasets across Venezuela's offshore basins.
- Developed in partnership with Geoex MCG, the reprocessed datasets are focused on illuminating offshore gas accumulations and identifying key prospects of interest.
- Basin-wide reprocessed datasets deliver unmatched strategic value and insight for decision-makers evaluating new acreage and regional growth opportunities.
- The program is delivered under Geoex MCG's exclusive agreement with the Ministry of Hydrocarbons (MINHID).

All backed by
DUG's powerhouse
seismic processing,
imaging and HPC
technology.
