DUG in collaboration with Geoex MCG

Project overview

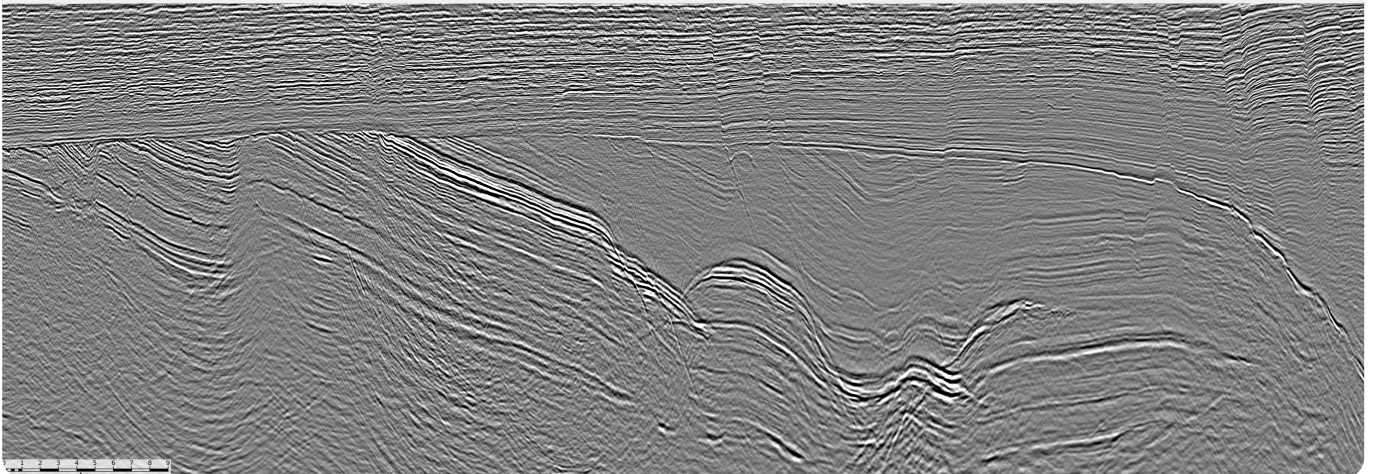

More than 48,000 km of exclusive broadband PreSDM reprocessed datasets across Venezuela's offshore basins.

Developed in partnership with Geoex MCG, the reprocessed datasets are focused on illuminating offshore gas accumulations and identifying key prospects of interest.

Basin-wide reprocessed datasets deliver unmatched strategic value and insight for decision-makers evaluating new acreage and regional growth opportunities.

The program is delivered under Geoex MCG's exclusive agreement with the Ministry of Hydrocarbons (MINHID).
